Product Technical Bulletin

Haptoglobin (human) ELISA Kit (ADI-900-229)

Effective Date: July 15th, 2017

As of the effective date above, the Haptoglobin I (human) ELISA Kit (Cat. #ADI-900-229) has been updated, with a small change in protocol. Specifically, the incubation buffer step has been removed and the standard concentration upon reconstitution has changed. Accordingly, the incubation buffer is no longer needed for the kit, so it is not included, and the standard dilution shown in the Reagent Preparation section of the manual has been changed to reflect the new concentration of the standard.

The new protocol has a shorter time to result and fewer steps, reducing the possibility of error. The new kits have undergone rigorous validation and perform similarly to the previous kits.

Please review the revised package insert carefully before use. We appreciate your continued business. If you have any questions, please do not hesitate to contact us at techserv-usa@enzolifesciences.com or by phone at (800) 942 0430.
